eanstalk
AWS Graviton now supported
AWS Graviton, an arm64-based processor, can offer up to 40% better price performance over the comparable x86 processor. To upgrade to an arm64 instance type, choose it in the 'Capacity' settings in 'Additional configuration.'
Elastic Beanstalk > Environments > Myappapurv-env
Creating Myappapurv-env
This will take a few minutes.
7:39pm Created security group named: awseb-e-e9vnqqnfp2-stack-AWSEBSecurityGroup-19VU0RQ57H6VW
7:39pm Created security group named: sg-0265ad98f8af07320
7:39pm Environment health has transitioned to Pending. Initialization in progress (running for 17 seconds). There are no instances.
7:39pm Created target group named: arn:aws:elasticloadbalancing:us-east-1:878001877651:targetgroup/awseb-AWSEB-XFM6JHL7B4V0/2dea950b763b0685
7:38pm Using elasticbeanstalk-us-east-1-878001877651 as Amazon S3 storage bucket for environment data.
7:38pm createEnvironment is starting.

default when using the Elastic Beanstalk console or EB CLI, you can safely enable this option.
On September 10th, 2021, we set the default value for this option to 'true' for all new environments. The option setting was not altered for existing environments.
If you are using a custom instance profile instead of a managed policy, your environment might show the No Data health status. This happens because the instances aren't authorized for the action that communicates enhanced health data to the service. To authorize the action, add permission to your instance profile according to Enhanced health authorization in the Amazon Elastic Beanstalk Developer Guide.

Myappapurv-env - Dashboard
Welcome
STARTEC2Instance - Lambda
Not secure | myappapurv-env.eba-6nkae2tv.us-east-1.elasticbeanstalk.com
Congratulations!
Your Docker Container is now running in Elastic Beanstalk on your own dedicated environment in the AWS Cloud.
This environment is launched with Elastic Beanstalk Docker Platform
